### COMPONENTS AND REPAIR MANUAL

MODEL CBM48 EARTH BORING MACHINE PART NO.

### Machine Serial No. 48C052010100 -Present

### Manual Part No.: E840000

**WARNING:** Battery posts, terminals and releated accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. **Wash hands after handling.** 

**WARNING:** The engine exhaust from this product contains chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

### SYSTEM OPERATION SPECIFICATIONS CBM48

### SPECIFICATIONS OF CBM-48 CRADLE EARTH BORING MACHINE

Boring Range:	ENGLISH	METRIC
Cased Bore	10"- 48"	25 cm - 122 cm

Engine: Air cooled, in-line 6 cylinder diesel, turbo charged 12 VDC electric system 162 hp ISO max. (121 kW) @ 2,500 RPM 139 hp continuous (104 kW) @ 2,500 RPM

Transmission: 4 forward speeds, 1 reverse

Clutch: Hydraulic clutch with Operator Presence Control Switch, Patent # 4,976,321

Final Drive: Planetary reduction, 4" hex chuck (10 cm)

Auger Torque: 108,000 ft/lbs. peak (146,428 Nm) in 1st gear

**Hydraulic Winch Parameters**: 60,000 lbs. Single Line (270 kN) max @ 2500 psi (175 bar) with infinitely adjustable pull speed, 300 Ft (9144 cm) of Cable, 3/4" (19 mm) Cable Diameter, Electronic/Hydraulic Engage/Disengage actuation.

#### Hydraulic Parameters: 3,000 psi (205 bar) max. system,

pressure comp. pump with load sense, 25 gpm (95 Lpm) @ 2,500 RPM, hydraulic tank capacity 30 gallons (114 L), oil level sight gauge, temp. and cleanout ports. Hydraulic Oil Cooler 30,000 Btu/hr.

Hydraulic Filtration: 1. Suction strainer - 100 mesh

- 2. In-take return filter 12 micron replaceable element
- 3. 10 micron spin-on return filter

Fuel Capacity: 44 gallon (167 L) capacity with sight gauge

**Seat:** Centrally Mounted Fully adjustable with Armrests, Safety Restraint Belt, and Operator Presence Switch, Operator Control Console with Joystick and Switch Functionality

### **Dimensions**

Machine: 64" (163 cm) wide x 20'2" (6.1 m) long x 99" (251 cm) high

**Carriage:** 7,500 lbs. (2,948 kg)

Frame: 9,500 lbs. (3856 kg)

Machine Centerline: 32" (83 cm)

### SYSTEM OPERATION SPECIFICATIONS CBM48

Engine 1. Speed 2. Oil 3. Fuel 4. Fuel Tank Capacity	Idle: 1050-1150 Max.: 2400-2500 SAE 5W-30 or refer to Engine Manual Commercially available diesel fuel with less than 0.5% sulphur content. Refer to Engine Manual. ~ 35 Gallons (132 I.)
<b>Gearbox</b> Capacity	80-90 wt. gear oil with EP additives ~ 2 Gallons (8 l.)
<b>Transmission</b> Capacity	Synthetic 50 wt. transmission fluid 1.5 Gallons (5.9 I)
Hydraulic System	
<ol> <li>Hydraulic Pump</li> <li>Hydraulic Control Valve Main Pull System</li> </ol>	Pressure Compensated w/ Load Sense Compensator Setting: ~ 3000 psi Stand-by Setting: ~ 250-300 psi Electric-proportional w/ Manual operation Relief Valve Setting: ~ 3100 + psi
3. Hydraulic Winch Lock	Setting: 125 psi
4. Hydraulic Cylinder Tie Downs	Setting: 3000 psi
5. Hydraulic Clutch	Setting: 225 psi
6. Hydraulic Fluid:	76 Unax AW #46 or equivalent
ISO grade 46, hydraulic fluid with anti-w Contains additives that provide oxida resistance and have water separating cl	ear additives. tion resistance, rust and corrosion protection, foaming naracteristics.
Consult McLaughlin Group, Inc. for reco	mmendations on cold weather operation.
7. Hydraulic Tank Capacity	~ 30 Gallons (114 I.)
<ul> <li>Electrical System</li> <li>1. Battery</li> <li>2. Hydraulic Control Valve Main Pull System</li> <li>3. Preheat System</li> <li>4. Fuses</li> <li>5. Cartridge Valves</li> </ul>	12V DC w/ 700 CCA Max. 12V DC w/ Valve Driver Card and Potentiometer .6 Amps to shift valve, 1.8 Amps to shift fully 12 V DC w/ manual delay 12V DC, Inline and panel, SFE and ATO styles 12V DC at 1-3 Amps

\*Specifications subject to change without notice or obligations.

### FILTERS AND FILL POINTS CBM48

**1. Engine Oil Fill** - Use only manufacturer's approved oils (Reference section 5.1 Engine Operation).

**2. Dip Stick** - Check daily with engine warm. Fill as needed to the upper dash mark on the

**3. Oil Filter** - Use only manufacturer approved engine filter. Reference section 5.1 Engine Operations for specifications and maintenance.

**4. Fuel Filter** - Use only manufacturer's approved replacement filters. (Reference section 5.1 Engine Operation for maintenence schedule).

**5. Fuel Level** - Fill as needed with branded grades of diesel fuel with a sulfur content below 0.5% (Reference section 5.1co Engine Operation for approved fuel specifications).

# FILTERS AND FILL POINTS CBM48

**6. Hydraulic Oil Level** - Fill to 1 1/2" below top of tank (with cylinders retracted). Change oil after first 1000 hours of use, then annually.

**7. Hydraulic Oil Filter** - Replace all filters with every engine oil change or if required by filter indicator, whichever comes first. Clean or replace in-tank suction strainer annually when oil is changed.

**8. Gearbox Oil Fill** - Fill to check point. Change after first 50 hours of use, then every 1000 hours or annually.

**9. Transmission Oil Fill** - Fill to check point with #50 synthetic transmission fluid. Change after first 50 hours of use, then every 1000 hours or annually.

**10. Engine Air Cleaner** - Check air cleaner element condition using the filter indicator. Clean or replace element when indicator is in the "red zone." Clean or replace when required by the filter indicator or annually, which ever comes first. Reference pages 5.1.23 & 5.1.24 of the Engine Operation section for more information.

#### **DEUTZ Diesel Engines**

are the product of research and development ranging over many years. The know-how thereby gained, coupled with high demands with regard to quality, forms the guarantee for the manufacture of engines featuring long service-life, high reliability, and low fuel consumption. It goes without saying that the high demands regarding protection of the environment are also fulfilled.

### Beware of Running Engine

Shut the engine down before carrying out maintenance or repair work. Ensure that the engine cannot be accidentally started - accidents may otherwise occur. When the work is complete, be sure to refit any panels and guards that have been removed.

Never fill the fuel tanks while the engine is running. Observe industrial safety regulations when running the engine in an enclosed space or underground.

#### Service and Maintenance

will also play a decisive role as to whether the engine fulfills to your satisfaction the demands you make on it. Observance of the prescribed maintenance intervals and careful carrying out of the service and maintenance jobs are therefore essential. Particular attention must be given with regard to applications involving differing and harder operating conditions as compared with normal operation.

#### Safety

When reading through this Manual, you will find this symbol marking all safety instructions and proceed with special care. Pass on these safety instructions to your operating personnel.

In addition, it is also necessary to observe the official safety and accident prevention rules.

#### **DEUTZ Service**

In case of operational troubles and queries concerning spare parts, please contact your DEUTZ agent. Where necessary, our trained specialists will ensure a quick and professional repair, using DEUTZ spare parts. Genuine DEUTZ spare parts are always manufactured to the latest technical standards. More information on DEUTZ SERVICE can be found at the end of this Operation Manual.

#### Asbestos

The seals and gaskets used in this engine are asbestos-free. When carrying out maintenance and repair work, please use appropriate spare parts.

### **MODEL DESIGNATION** 2.1 Model

### 2.1.1 Rating Plate

The model designation **A**, the engine serial number **B** and the performance data are stamped on the rating plate. The model and engine serial number must be given when ordering parts.

### 2.1.2 Location of Rating Plate

The rating plate **C** is attached to the crankcase; depending on the design, a second rating plate may be attached to the air duct.

### 2.1.3 Engine Serial Number

The engine serial number **D** is stamped onto the crankcase as well as on the rating plate.

### 2.1.4 Numbering of Cylinders

The cylinders are numbered consecutively, beginning at the flywheel end.

Adjustments to the regulator are to be carried out only by authorized DEUTZ SERVICE - specialists.

### **ENGINE DESCRIPTION** 2.1 Model

### 2.1.5 Direct Injection FL 912

Engines with direct injection are used where high performance is required.

### 2.1.6 Two-stage Combustion FL 912W

Engines with two-stage combustion are used where it is particularly important to keep exhaust emissions to an absolute minimum.

### 2.2.2 Exhaust Side F4L 912

- 16 Air intake pipe
- 17 Exhaust manifold pipe
- 18 Screen
- 19 Alternator
- 20 Starter
- 21 Engine mounting
- 22 Crankcase
- 23 Crankcase ventilation

# **ENGINE DESCRIPTION** 2.3 Lube Oil Circuit

# 2.3.1 Lube Oil Circuit FL 912/913

- Oil Pan Intake Manifold 1
- 2
- Oil pump 3
- Oil pressure control valve Pressure-oil line Bypass line or selectively 4 5
- 6 7
- Finned pipe spiral or selectively Frame oil cooler 8
- Lube oil filter 9

- 10 Safety valve 11 Main oil gallery 12 Crankshaft bearing 13 Con-rod bearing
- 14 Camshaft bearing 15 Tappets
- 16 Push rod (hollow, for oil feed to rocker arm lubrication)
- 17
- 18
- Rocker arm bearing Metering plug (r arm lubrication)\* Protective sleeve for push rod Throttle bore (for lubrication of 19 20
- Injection jet for cooling the pistons Connection for oil pressure gauge Oil pressure gauge 21
- 22 23
- 24 Injection pump connected to lube
- oil circuit
- 25 Connection point for oil heating\*\*

## 2.3.2 Lube Oil Circuit BF6L 913

- 1 Oil Pan
- Intake manifold 2
- 3 Oil pump
- 4 5 Oil pressure control valve Pressure-oil line
- Connecting line to oil cooler

- 5 6 Corn 7 Frame on 8 Lube oil filten 9 Safety valve 10 Main oil gallery 11 Crankshaft bearing Con-rod bearing `mshaft bearing `(with imp `r arm) Tappets (with impulse lubrication
  - Push rod (hollow, for oil feed to r. arm lubrication) Rocker arm bearing 15
  - 16
- 17
- Metering plug (r arm lubrication)\* Protective sleeve for push rod (oil return form cylinder head to 18
- crankcase) Throttle bore (for lubrication of 19 the gear wheels)
- Injection jet for cooling the pistons Oil line for lub. of the exhaust 21
- turbocharger Oil ret. line from exhaust turboc. to 22
- the crankcase 23
- Oil pressure gauge Partial flow lube oil filter 24
- Connection point for oil heating\*\* 25
- 26 Injection pump connected to lube oil circuit
  - only for inclined engines
  - in this instance the filter holder must be replaced. Please contact our service representative for this alteration.

# **ENGINE DESCRIPTION** 2.4 Fuel System Schematic

# 2.4.1 Fuel Circuit

- 1 Fuel Tank
- 2 Fuel line from tank to fuel pump
- 3 Fuel supply pump
- 4 Easy-change fuel filter
- 5 Injection pump
- 6 Injection lines
- 7 Injection valves
- 8 Oil leakage line
- 9 Fuel overflow valve
- 10 Overflow valve
- 11 Fuel return line to tank A
- Clearance: keep as far apart as

possible.

# **ENGINE OPERATION** 2.5 Engine Cooling

#### 2.5.1 Regulation of Coolant Flow using the Exhaust Thermostat

- 1 Pressure-oil line from engine to exhaust thermostat
- 2 Air line to exhaust thermostat
- 3 Exhaust manifold pipe
- 4 Exhaust thermostat
- 5 Control line to hydraulic coupling
- 6 Hydraulic coupling
- 7 Cooling fan
- 8 Cooling fan drive
- 9 Oil return line to crankcase
- 10 Ventilation line
- 11 Adjusting pin with special seal

## 2.5.2 Regulation of Coolant Flow using the Exhaust Thermostat and Solenoid

- 1 Pressure-oil line from engine to exhaust therostat
- 2 Air line to exhaust thermostat
- 3 Exhaust manifold pipe
- 4 Exhaust thermostat
- 5 Control line to hydraulic coupling
- 6 Hydraulic coupling
- 7 Cooling fan
- 8 Cooling fan drive
- 9 Oil return line to crankcase
- 10 Ventilation line
- 11 Adjusting pin with special gasket
- 12 Solenoid

# **ENGINE OPERATION** 3.1 Commissioning

#### 3.1.1 Adding Engine Oil

As a rule, engines are delivered empty of oil. Pour lube oil into the oil filler neck (arrow). For oil grade and viscosity, see pg 4.1

#### 3.1.2 Filling Oil Bath Air Cleaner

#### 3.1.3 Adding Fuel

Fill oil cup 1 of the oil bath air cleaner with engine oil up to the arrow. For oil grade and viscosity, see 4.1

Use only commercial-grade diesel fuel. For fuel grade see 4.2. Use summer or winter-grade fuel, depending on the ambient temperature.

Oil may not be filled into the dust collector of the precleaner, if this is fitted.

Never fill the tank while the engine is running. Keep the filler cap area clean and do not spill fuel.

#### 3.1.4 Ventilation Model: "Bosch" fuel pump

- Loosen overflow valve 1 at the lower (larger) hexagon.
- Loosen hand pump 2 at the notched grip 3 by unscrewing by several turns to the left.
- Actuate hand pump 2 until bubble-free fuel is emitted at the loosened overflow valve 1.
- Tighten overflow valve1, continuing to pump at the same time.
- Tighten grip 3.

#### 3.1.4 Ventilation Model: "IMSA" fuel pump

- Loosen overflow valve 1 at the lower (larger) hexagon.
- Actuate preliminary pump lever 2 against the spring pressure until bubble-free fuel is emitted at the loosened overflow valve 1.
- Tighten overflow valve 1, continuing to pump at the same time.

# **ENGINE OPERATION** 3.1 Commissioning

#### **3.1.5 Other Preparations**

- Check battery and cable connections see 6.7.1
- Transport hooks Remove if fitted (see 6.7.3)
- Trial run

After the engine has been prepared, let it run for about 10 minutes without load.

- During and after trial run
- Check the engine for leaks.

After the engine has been turned off

- Check the oil level, see 6.1.2
- If necessary, top oil, see 3.1.1 Retension V-belts, see 6.5
- Breaking in

During the break-in phase - about 200 operating hours - check the oil level twice a day. After the engine is broken in, checking once a day will be sufficient.

#### **3.1.6 Additional Maintenance Work**

The following maintenance should be carried out after 50-150 operating hours:

- Change lube oil, see 6.1.2
- Change oil filter cartridge, see 6.1.3
- Change fuel filter cartridge, see 6.2.1
- Check V-belts and retension as necessary, see 6.5
- Check valve clearance and adjust as necessary, see 6.6.1
- Check the engine for leaks.
- Check the engine mount and adjust as necessary, see 9.2

#### **3.1.7 Selector Switch for Oil Heater**

Position of selector switch for oil filter console with oil heater connection: Pos. 1: open Pos. 2: closed

For engines without oil heating, the selector switch is always open Pos. 2: to lock closed.

# **ENGINE OPERATION** 3.2 Starting

# **3.2.1 Electric Starting**

Before starting, make sure that nobody is standing in the immediate vicinity of the engine or driven machine.

#### After repair work:

Check that all guards have been replaced and that all tools have been removed from the engine.

When starting with flame glow system, do not use any other starter substance (e.g. injection with start pilot).

#### Caution: If the speed regulator has been removed, the engine must not be tested under any circumstances: Disconnect the battery.

Do not actuate the starter for more than 20 seconds. If the engine does not catch wait a minute then try again.

If the engine does not catch after two attempts, refer to the Diagnosis Chart (see 7.1)

#### with Cold-Start Aid/Flame Glow fr 60=9.5 and 19 volts

- Insert key.
- Position 0 = no operating voltage
  Turn key clockwise.
- Position 1 = operating voltage
   Pilot lights come on.
- Push the key in and turn further clockwise against spring pressure
  - Glow plug indicator light comes on
  - Position 2 = Preheat for approx. 60 seconds (hold key in position)\*
  - Glow plug indicator light goes out
  - Position 3 = start
- Release key as soon as engine fires.
   Pilot lights go out.
- \* By afterignition in position 2 for up to approx. 3 mins, it is possible to lower further the exhaust gas opacity in the revving-up phase.

- Where possible, disengage the clutch to separate the engine from any driven parts.
- Move speed control lever 1 into idle position.

#### Starting without Cold-Start Aid

- Insert key.
- Position 0 = no operating voltage
   Turn key clockwise
  - Position 1 = no operating voltagePilot lights come on.
- Push the key in and turn it further clockwise against spring pressure
  - Position 2 = no function
  - Position 3 = start

#### with Cold-Start/Flame Glow Plug FR 20/30 = 11 and 23 volts

- Insert key.
  - Position 0 = no operating voltage
- Turn key clockwise
  - Position 1 = operating voltage
  - Pilot lights comes on.
- Push the key in and turn further clockwise against spring pressure
   Glow plug indicator light comes on
  - Position 2 = Preheat for approx.

20-30 seconds (hold key in position)\*

- Glow plug indicator light goes out
  Release key as soon as engine fires.
  - Pilot lights go out.
- \* By afterignition in position 2 for up to approx. 3 mins, it is possible to lower further the exhaust gas opacity in the revving-up phase.

#### with heating pipe

- Insert key.
  - Position 0 = no operating voltage
- Turn key clockwise
  - Position 1 = operating voltage
  - Pilot lights comes on.
- Push key in and turn further clockwise against spring pressure.
   Position 2 = Preheat for approx. 60
  - seconds (hold key in position)\* - Position 3 = Start
- Release key as soon as engine fires.
  Pilot lights go out.
- \* By afterignition in position 2 for up to approx. 3 mins, it is possible to lower further the exhaust gas opacity in the revving-up phase.

# **ENGINE OPERATION** 3.3 Monitering Systems

#### **3.3.1 Engine Oil Pressure**

#### **Oil Pressure Pilot Light**

- The oil pressure pilot light comes on with operating voltage on and engine off.
- The oil pressure pilot light should go out when the engine is running.

• The pointer must remain in the

green sector over the entire range.

• The pointer must indicate the minimum oil pressure (see 9.1).

25 754 0

# 3.3.2 Engine Temperature

#### **Temperature Gauge**

• The engine temperature gauge pointer should remain in the green sector most of the time. It should rarely enter the yellow-green sector. If the pointer enters the orange sector, the engine is overheating. Turn off and establish the cause from the Diagnosis Chart (see 7.1).

# **3.3.3 Cooling Fan Drive**

 If the V-belt rips, pressure pin 1 of the electrical switch is actuated by the tension roller and an acoustic or light signal is given.
 Switch off the engine immediately to prevent overheating.

# **ENGINE OPERATION** 3.4 Stopping

# **3.4.1 Mechanical Shutdown**

- Move speed control lever to low idle.
- Operate shutdown lever 2 until the engine comes to a stop. The charge pilot light and the oil pressure pilot light will come on when the engine stops.
- Turn key counter-clockwise (to position 0) and remove. The pilot lights will go out.

# **3.4.2 Electrical Shutdown**

• Turn key counter-clockwise (to position 0) and remove. The pilot lights will go out.

#### **Ignition Key**

# **ENGINE OPERATION** 3.5 Operating Conditions

# **3.5.1 Winter Operation**

- Lube Oil Viscosity
  - Select the oil viscosity (SAE grade) according to the ambient temperature when the engine is started, see 4.1.2
  - Increase oil change frequency when operating below -10°C, see 6.1.1
- Diesel Fuel
  - Use winter-grade diesel fuel for operation below 0°C, see 4.2.2
- Additional Maintenance Work
  - Drain the sludge from the fuel tank once a week. (Unscrew the sludge drain plug).
  - If necessary, allow the oil in the oil bath air cleaner and the engine oil to settle at the ambient temperature.
  - Below -20°C, after removing the starter if necessary, smear the ring gear on the fly wheel via the pinion bore from time or time with cold-resistant grease, (e.g. Bosch grease FT 1 V 31).
- Cold-Start Aid
  - At temperatures near or below freezing point, use glow plugs if necessary, see 3.2.1. This not only lowers the starting limit temperature, but provides easier starting at temperatures normally not requiring a starting aid.

#### Battery

- Efficient cold starting requires a healthy battery, see 6.7.1
- The starting limit temperatures can be lowered by 4-5 °C by heating the battery up to about +20 °C. (To do so, remove the battery and store in a warm place.)

## 3.5.2 High Ambient Temperatures High Altitude

- As the altitude and ambient temperature rise, the density of air tends to decrease, which affects the maximum power output of the engine, the exhaust gas quality and, in extreme cases, the starting behavior. Under transient conditions, the engine can be used at altitudes up to 1000m and temperatures up to 30°C. If the engine is to operate under more severe conditions (at higher altitudes or temperatures), it will be necessary to reduce the injected fuel quality and thus, engine power.
- If you have any doubts about engine operation under these or similar conditions, ask your engine or equipment supplier whether

the engine has been derated in the interests of reliability, service life and exhaust gas quality (smoke). Otherwise contact DEUTZ SERVICE.

# **OPERATING MEDIA** 4.1 Lube Oil

# 4.1.1 Quality Grade

Lube oils are differentiated according to their performance and quality class. In commom use are specifications named after the **API** (American Petroleum Institute) and **ACEA** (European Engine OII Sequences).

#### Approved API Oils:

At least: CF-4

#### Approved ACEA Oils:

At least E1-96

## 4.1.2 Viscosity

As the viscosity of the lube oil is dependent on temperature, the choice of SAE grade should be governed by the ambient temperature prevailing at the engine operating site. Optimum operating behaviour will be attained if you take the accompanying oil viscosity diagram as a guide. Should the temperature fall temporarily below the limits of SAE grade selected, cold starting may be affected but the engine will not be damaged. In order to keep wear to a minimum, do not exceed application limits for extended periods of time. Oil changes dictated by the seasons can be avoided by using multi-grade lube oils. Multi-grade oils - particularly light flowing oils - also reduce fuel consumption.

Oil change intervals, see 6.1.1 Oil capacities, see 9.1

# **OPERATING MEDIA** 4.2 Fuel

# 4.2.1 Quality Grade

Use commercially available diesel fuel with less than 0.5% sulphur content. If the sulphur content is higher than 0.5% oil change intervals should be reduced, see 6.1.1

The following fuel specifications / standards are approved:

- DIN EN 590
- BS 2869: A1 and A2 (with A2, take note of the sulphur content!)
- ASTM D 975-88; 1-D and 2-D
- NATO Code F-54 and F-75

Any exhaust emission levels, which may have been determined during type approval tests always refer to the reference fuel prescribed by the authorities for the type approval test.

# 4.2.2 Winter-Grade Fuel

Waxing may occure at low temperatures, clogging the fuel system and reducing engine efficiency. If the ambient temperature is less than  $0^{\circ}$ C, wintergrade fuel (suitable down to  $-15^{\circ}$ C) should be used. (This fuel is usually available from the filling stations well in advance of the cold months). Diesel fuel containing additives (Super diesel) is often on sale as well, for use down to  $-20^{\circ}$ C.

- Below -20°C, petroleum must be added. For the required mixing ratios please refer to the adjacent diagram.
- For artic climate zones down to -44°C special diesel fuels can be used.

If summer-grade diesel fuel must be used at temperatures below 0°C, up to 60% kerosene can be added (see diagram).

In most cases, adequate resistance to cold can be obtained by adding a flow improver (additive). Please inquire at DEUTZ-PARTNER.

Mix in tank only. Fill with the appropriate amount of kerosene first, then add the diesel fuel.

# **ROUTINE MAINTENANCE** 5.1 Maintenance Schedule

Operating hours (OP) <sup>1)</sup>									ch	check				
Once	every			ev	iery					cl	clean			
2)	10 OH or										c	hange	000000	
50-150	daily	125	250	500	1000	2000	3000	5000				Operation		
	•								•			Oil level in engine / separate container	6.1.2	
•									٠			Engine leaks		
	•								٠			Oil bath- and dry type air cleaners 3) 4)	6.3/6.4	
		•							•			Battery and cable connectors	6.7.1	
		٠	•	٠					•			Cooling system (depending on engine use) 3) 6)	6.3.1/6.3.2	
•		•	•	•					•		•	Engine oil (depending on engine use) 5)	6.1.1/6.1.2	
•				٠							•	Oil filter cartridge	6.1.3	
•											•	Fuel filter cartridge	6.2.1	
•				•	•				•			Valve clearance (adjust if necessary)	6.6.1	
•					•		•		•			Engine mounts (retighten if necessary)	9.2	
•			•						•			V-belts (retension if necessary)	6.5	
			•						•			Warning system	6.5.5	
•										٠		Fuel precleaner	6.2.2	
•					•				•			Mountings	6.8.1	
					•				•			Flame glow plugs 4)	6.8.3	
				•							•	Partial-flow oil filter	6.1.4	
							•		•			Sheathed element heater plugs		

The specified engine maintenance times are maximum values. Depending on the operating environment, shorter maintenance intervals may be required. Please observe the operating instructions of the equipment manufacturer.

 Recommended maximum
 Commissioning new or reconditioned engines
 Clean if needed, see Section 6.3 4) Change if necessary. If fitted, service after service indicator.

5) Oil change interval, see Section 6.1.1

6) Clean system / cooling fins.

# **5.2 Maintenance Charts**

The maintenance charts shown here are supplied as self-adhesive labels with each engine. They should be affixed where they can be seen clearly on the engine or driven equipment.

Check that this is the case.

If necessary, ask your engine or equipment supplier for a fresh supply of labels. Routine work should be carried out according to the schedule in 5.1

Stop the engine before carrying out any maintenance work.

# **ROUTINE MAINTENANCE** 5.3 Completed Maintenance Jobs

Hours	Date	Signature / Stamp	Hours	Date	Signature / Stamp
50-150*			-		
125			250		
375			500		
625			750		
875			1000		
1125			1250		
1375			1500		
1625			1750		
1875			2000		
2115			2250		
2375			2500		
2625			2750		

\* Commissioning new and overhauled engines.

The maintenance jobs duly completed can be recorded in the above table.

# **SERVICE AND MAINTENANCE** 6.1 Lubrication System

# 6.1.1 Oil Change Intervals

- The oil change intervals are dependent on the engine application and the quality of the lube oil.
- If the engine runs fewer hours during the year than stated in the table, the oil should be changed at least once a year.
- The table refers to the following conditions:
  - For diesel fuel: sulphur content max. 0.5% by weight.
  - Continuous ambient temperatures down to -10°C (+14°F)
- If the sulphur content is > 0.5 to 1% or the continuous ambient temperature below -10°C (+14°F), the intervals between oil changes should be halved.
- In case of fuels containing more than 1% sulphur, contact your service representative.

Change the oil with the engine off but still warm (lube oil temperature approx.  $80^{\circ}C$ )

#### 6.1.2 Checking Oil/ Checking Engine Oil 6.1.2.1 Obecking Oil Level 6.1

- Ensure that the engine or vehicle is in a horizontal position.
- Warm Engine: Switch off engine, wait 5 minutes and check the oil level.
- Cold Engine:
   Check oil level.
   To this end:
- Remove the oil dipstick.
- Wipe the dipstick with a non-fibrous, clean cloth.
- Insert it to the top and remove again.
- Check the oil level, and if necessary, top up to the "MAX" mark.
  If the oil level is only just above the
  - "**MIN**" mark, more oil must be added.

	Installed engines		Lube oil intervals in OH				
	maturicu cirginea		Naturally aspirated engines	Turbochar	jed engines		
Lube oil quality	API class	sification	CF-4/CH-4/CG-4	CF-4	CH-4/CG-4

Ш	< 100 000	60	30 000	15 000	30 000		

# 6.1.2.1 Checking Oil Level 6.1.2.2 Engine Oil Change

- Ensure that the engine or vehicle is
   on a level surface.
- Allow the engine to warm up
   Lube oil temperature approx. 80°C.
- Switch off the engine.

- Place oil tray under the engine.
- Unscrew drain plug.
- Drain oil.
- Fit oil drain plug, with the new gasket and tighten firmly (for torque, see 9.2)
  Fill with lube oil.
- Fin with fube on.
   For grade/viscosity, see 4.1
   For guantity, see 9.1
- Check oil level, see 6.1.2.1

Be careful when draining hot oil danger of scalds! Do not let used oil run into the soil but catch it in a container ready for proper disposal.

The oil level must not fall below the " $\ensuremath{\text{MIN}}$  " marking.

# **SERVICE AND MAINTENANCE 6.1 Lubrication System**

# 6.1.3 Changing Oil Filter

- Undo the filter cartridge using a commercial tool and spin off.
- Catch any dripping oil.

- Clean any dirt from the filter carrier rim.
- Lightly oil the rubber gasket of the new oil filter cartridge.
- Screw in the new cartridge finger tight against the gasket.

- Tighten the oil filter cartridge with • another half-turn.
- Check oil level, see 6.1.2
- Check oil pressure, see 3.3.1
- Check cartridge seal for leaks.

## 6.1.4 Changing the Partail - Flow **Oil Filter Insert**

- Unscrew oil drain plug 1 and drain off oil.
- Unscrew tension screw 2. Remove the cover.
- Unscrew the dirtied filter insert 3. Clean the filter housing.
- Check and if necessary replace cover seal 4.
- Screw in oil drain plug 1 with new seal •
- Fit new filter insert.
- Screw on cover and sealing ring 6.
- Check for leaks and check the oil • pressure during a test run.

# **SERVICE AND MAINTENANCE** 6.2 Fuel System

# 6.2.1 Changing Fuel Filter

- Close fuel stopcock.
- Undo fuel filter cartridge with commercial tool and spin off.
- Catch any fuel.

No naked flames when working on the fuel system. NO SMOKING!

- Clean any dirt from the filter cartridge with a final half-turn.
- Apply light film of oil or diesel fuel to the rubber gasket of the new fuel filter cartridge.
- Screw in the new cartridge finger tight against the gasket.

- Tighten the fuel filter cartridge with a final half-turn.
- Open fuel stopcock.
- Check for leaks.

## 6.2.2 Fuel Precleaner Cleaning the Fuel "Bosch" model

- Close the fuel shut-off valve.
- Loosen tensioning nut 2.
- Swing wire cup 1 to the side.
- Remove filter cone 5 with strainer 4 and clean in fuel.
- Use a new seal 3 for filter cone 5.
- Bleed the fuel system, see 3.1.4
- Check for leaks.

## Cleaning the Fuel Filter <u>"IMSA" model</u>

- Close the fuel shut-off valve.
- Loosen hexagonal nut 1 and unscrew with sealing ring 2.
   Close the fuel shut-off valve.
- Remove cover 3.
- Remove fuel strainer 4.
- Clean the fuel strainer 4 in fuel. Replace if necessary.
- Refit in the reverse order.
- Bleed fuel system, see 3.1.4
- Check for leaks.

No naked flames when working on the fuel system. NO SMOKING!

# **SERVICE AND MAINTENANCE** 6.3 Cooling System

# 6.3.1 Cleaning Intervals

- The amount of contamination in the cooling system depends on the engine
- Spilled oil or fuel on the engine increases the risk of contamination. Be especially careful if the engine is used in dusty environments.
- Serious contamination can occur, for example:
  - on construction sites where there is a high level or air borne dust.
  - in harvesting applications where here are high concentrations of chaff and chopped straw in the vicinity of the machine.
- Because applications vary, cleaning intervals have to be determined from case to case. The cleaning intervals given in the table on the right can be used as a guide.

Inspection and cleaning intervals Recommended OH	Engine application
2000	Ships, Electrical units in enclosed areas, pumps
1000	Vehicles on reinforced highways
500	Tractors, fork-lift trucks, mobile electrical units
250	Vehicles on construction sites and on roads with loose surfaces, constrution machinery, compressors, mining equipment
125	Agricultural machinery, tractors used for harvesting purposes

# **SERVICE AND MAINTENANCE** 6.4 Combustion Air Filter

# 6.4.1 Cleaning Intervals

- The amount of dirt in the air cleaner depends on the amount of dust in the air and the size of the air cleaner used. If a high level of dust is anticipated, a cyclone-type precleaner can be fitted to the air cleaner.
- Cleaning intervals will have to be determined from case to case.
- If dry-type air cleaners are used, they should be cleaned only in accordance with the service indicator or the service switch.
- Air cleaner servicing is needed when:
  - Service indicator the red signal 1 is fully visible when the engine is off.
  - Service switch the yellow pilot light comes on when the engine is running.
- After carrying out service work, reset the signal by pressing the button on the service indicator.

# 6.4.2 Emptying Cyclone Type Precleaner

- Undo wing nut 1 and remove cover 2. Turn engine off and wait about 10
- Remove collector bowl 3 from lower section 4 and empty. Clean leaves, straw and other foreign matter from lower section of precleaner.
- Reposition collector bowl 3 onto lower section 4, fasten cover 2 in place by tightening wing nut 1.

Never fill collector bowl with oil. Replace collector bowl if damaged.

- Turn engine off and wait about 10 minutes for the oil to drain from filter housing 1.
- Release snap clips 2 and remove oil cup 3 together with filter element 4. If necessary pry element out with a screwdriver, taking care not to damage the rubber gasket 5.
- Remove dirty oil and sludge. Clean oil cup.
- Clean filter element 4 in diesel fuel and allow to drip-dry.

- Clean filter housing 1 if very dirty.
- Inspect and replace rubber gasket 5 and 6 if necessary.
- Fill oil cup with engine oil up to the mark (arrow) (for viscosity, see 4.1.2).
- Refit oil cup and element to filter housing and secure with snap rings.

Never clean air cleaner with gasoline. Dispose of cold oil in accordance with environmental regulations.

# **SERVICE AND MAINTENANCE** 6.4 Combustion Air Filter

# 6.4.4 Dry Type Air Cleaner Dust Discharge Valve

- Empty dust discharge valve 1 by pressing apart lips of discharge slot as indicated by arrows.
- Clean discharge slot from time to time.
- Remove any caked dirt by pressing together the upper section of the valve.
- The amount of dirt in the air cleaner depends on the amount of dust in the air and the size of the air cleaner used. If a high level of dust is anticipated, a cyclone-type precleaner can be fitted to the air cleaner.

#### **Filter Cartridges**

- Undo clip fasteners 1.
- Take off hood 2 and remove cartridge 3.
- Clean cartridge (replace at least once a year).
- Clean cartridge 3.
   Blow out from inside out with dry compressed air (max. 5 bar), (or in difficult cases, tap out, taking care not to damage the cartridge, or wash according to manufacturer's instructions.
- Through regular removal and replacement, the gaskets on the filter cartridge can become damaged. Check paper filter (light showing through) and gaskets for damage. Replace if necessary.
- After five cleaner services or after two years at the latest, replace safety cartridge 4 (never clean). To do so:

- Undo hex. nut 5 and remove cartridge 4. - Install new cartridge, insert and tighten hex. nut.

- Cleaning intervals will have to be determined from case to case.
- Install cartridge 3, replace hood 2 and do up clip fasteners 1.

Never clean filter cartridge with gasoline or hot fluids.

# **SERVICE AND MAINTENANCE 6.5 Belt Drives**

# 6.5.1 Checking V-Belts

- Inspect entire V-belt for damage.
- Replace damaged V-belts.
- After installing new belts, run engine for 15 minutes, then check belt tension.
- To check the tension of the V-belt, use a tension gauge (see 9.3).
- Place indicator arm 1 into gauge.
- Position gauge on V-belt 2, midway between the pulleys, with flange 3 on bottom of gauge against the edge of belt.
- Push slowly on the black pad 4 at right angles to belt 2 until the spring is heard or felt to trigger.

#### 6.5.3 Tensioning **Alternator Belts**

- Loosen bolts 1, 2 and 3.
- Press alternator 4 outwards in direction of arrow A until correct belt tension is achieved.
- Retighten bolts 1, 2 and 3.

- Carefully remove the gauge without altering the position of the indicator arm 1.

Read off the value where the black indicator arm 1 intersects scale 5 (arrow). For settings, see 9.1

- If necessary, retension belt and measure again.

only with the engine off. Refit belt guard, if provided.

## 6.5.4 Changing **Alternator Belts**

- Remove fan V-belts as decribed . under 6.5.2
- Loosen bolts 1, 2 and 3.
- Swing alternator 4 inwards in direction of arrow B.
- Remove V-belts and place on new belt.
- Swing alternator 4 outwards in direction of arrow A until correct belt tension is achieved.
- Retighten bolts 1, 2 and 3.
- Fit fan V-belts.

Only check/tension/replace V-belts Retighten new V-belts after 15 minutes when the engine is at standstill. If running time. necessary, replace V-belt cover.

## 6.5.2 Changing the Fan V-Belt

- To replace, press tension roller 1 using a commercial tool and remove the V-belts.
- Fit new V-belts.

Check tension and change belts When new V-belts are fitted check the belt tension after ca. 15 minutes running time.

#### 6.5.5 Checking Warning System

- If the V-belt rips, pressure pin 1 of the electrical switch is actuated by the tension roller and an accoustic or light signal is given.
- Functional check by pressing in pin 1.

Only carry out a check when the engine is at a standstill.

# **SERVICE AND MAINTENANCE** 6.5 Belt Drives

## 6.5.6 Tensioning and Changing Air Compressor V-Belts

- Unscrew hexagonal bolts 1.
- Remove outer half of belt pulley 2.
- If necessary replace the V-belts.

- To tighten, remove one or more of the inner intermediate discs 3. Place the removed half of the V-belt pulley 2.
- Retighten bolt 1. While tightening, simultaneously rotate the engine to prevent the V-belt from being crushed.

When new V-belts are fitted, check the belt tension after ca. 15 minutes running time.

## 6.5.7 Air Compressor Design with Doube V-Belt

- Screw off hexagonal nut 1, remove V-belt pulley half 2, V-belt 3 and intermediate disc packet 7.
- Remove intermediate disc 4, rear V-belt 3, intermediate disc packet 6 and V-belt disc half 5.
- To tighten, remove on or more of the intermediate discs from packet 6 or 7. Place the removed discs in front of or behind V-belt pulley halves 2, so that the V-belt remains aligned. Always take the same number of discs from each packet.
- Fit in the reverse order. While tightening nut 1, the engine must be rotated to prevent the V-belts from being crushed.

If a V-belt is worn or damaged, both belts in the set must be replaced. The difference in the length of the new V-belts may not exceed 0.15%.

Only check or replace V-belts when the engine is at a standstill. If necessary replace V-belt cover. When new V-belts are fitted, check the belt tension after approx. 15 minutes running time.

#### 5.1.26

# **SERVICE AND MAINTENANCE** 6.6 Adjustments

## 6.6.1 Checking / Adjusting Valve Clearances

- Remove the cylinder head cover.
- Position crankshaft as per schematic
- Before adjusting valve clearance, allow engine to cool down for at least 30 minutes. The oil temperature should be below 80°C.
- Check valve clearance 1 between rocker arm / tappet contact face 2 and valve stem 3 with feeler gauge 6 (there should be only slight resistance when feeler blade is inserted).

For permissible valve clearance, see 9.1

- Adjust valve clearance if necessary:
  - Release locknut 4.
  - Use screwdriver 7 to turn setscrew 5 so that the correct clearance is attained after locknut 4 has been tightened.
- Check and adjust valve clearance on all remaining cylinders.
- Replace cylinder head cover (use new gasket if needed).

Only inclined engines are fitted with an additional oil jet for lubrication of the bearing. Any adjustments must be carried out in an authorized specialist workshop.

## 6.6.1.1 Valve Clearance Adjustments Schematic

#### Crankshaft Position 1:

Turn crankshaft until both valves in cylinder 1 overlap (exhaust valve about to close, inlet valve about to open). Adjust clearance of valve **marked in black** on schematic. Mark respective rocker arm with chalk to show that adjustment has been done.

#### Crankshaft Position 2: Turn crankshaft one full revolution (360°). Adjust clearance of valves marked in black on schematic.

# **SERVICE AND MAINTENANCE** 6.7 Accessories

6.7.1 Battery 6.7.1.1 Checking Battery and Cable Connectors

- Keep battery clean and dry.
- Undo dirty clamps.
- Clean terminal posts (+ and ) and clamps of the battery, grease with acid-free and acid-resistant grease.
- When reassembling, ensure that clamps make good contact. Turn clamp bolts finger tight.

- Remove caps 1.
- If testers 2 are used, the electrolyte should come up to their base.
- If testers are not used, the electrolyte level should be 10 -15mm above the top of the plates.
- If necessary, top up with distilled water.
- Replace caps.

 Measure the electrolyte density of individual cells with a commercial hydrometer.

The hydrometer reading (see table on following page) indicates the state of charge.

During measurement, the temperature of the electrolyte should preferably be +20°C.

in [k	g/ I]	in[°l	Bé (Baumégrad)*]	State of Charge
Normal	Tropics	Normal	Tropics	
1,28	1,23	32	27	Fully charged
1,20	1,12	24	16	Half charged, recharge
1,12	1,08	16	11	Discharged, recharge immediately

\* Measurement of electrolyte density in ° Bé (Baumégrad) is out of date and rarely used today.

The gasses emitted by the battery are explosive! Keep sparks and naked flames away from the battery. Do not allow battery acid to come into contact with skin or clothing. Wear protective goggles. Do not rest tools on the battery.

# **SERVICE AND MAINTENANCE** 6.7 Accessories

## 6.7.2 Three-Phase Alternator

## 6.7.3 Lifting Tackle

- Never disconnect the cable between battery, alternator and regulator while the engine is **running.**
- If, however, it is necessary to start and operate the engine without the battery, disconnect the regulator from the alternator before starting.
- Be sure not to confuse the battery terminals.
- Replace defective bulb of the charge pilot lamp immediately.
- When washing the engine, cover up the alternator and regulator.
- The habit of touching a lead against the frame to check whether it is live must under no circumstances be used with three-phase electrical systems.
- In case of electric welding connect ground terminal on the welder directly to the piece being welded.

- Always use proper lifting tackle 1 when transporting the engine.
- After transportation and before commissioning of the engine: Remove transport eyes 2.

# **SERVICE AND MAINTENANCE** 6.8 Engine Cleaning

## 6.8.1 Cleaning the Engine

## With Compressed Air

- Switch off the engine.
- Remove engine covers, cooling air hoods.
   Replace following cleaning and
- Cover electrical / electronic components / connections (e.g. alternator, starter, regulator,
- solenoid).
  Pass compressed air through the engine, being careful with the cooler and cooling fins (start at the exhaust side). Remove dirt which has been blown into the inner compartment.

## With Cold-Cleaning Compound

- Switch off the engine.
- Remove engine covers, cooling-air hoods.
- Cover electrical / electronic components / connections (e.g. alternator, starter, regulator, solenoid).
- Spray engine with commercial cold-cleaning compound and leave to work for approx. 10 minutes.
- Spray engine clean with water jet and if necessary repeat procedure.
- Drive the engine warm so that remaining water evaporates.

## With High=Pressure Equipment

- Switch off the engine.
- Remove engine covers, cooling-air hoods.
- Cover electrical / electronic components / connections (e.g. alternator, starter, regulator, solenoid).
- Clean engine with steam jet (max. spray pressure 60 bar, max. steam temperature 90°C).
- Drive the engine warm so that remaining water evaporates.

The engine may only be cleaned when it is at a standstill.

# **SERVICE AND MAINTENANCE** 6.9 Additional Maintenance

6.9.1 Checking the Mountings

### 6.9.2 Checking the Function of the Heating Pipe

- Cylinder head cover 1
- Air-intake pipe 2
- Coupling sleeves
- Exhaust line 3
- Engine mounting 4

- When functioning correctly, the heating pipe heats up via the integrated heating coil when starting the preheating
   heating pipe
  - air intake pipe

## 6.9.3 Checking the Function of the Flame Glowing System

• When functioning correctly, intake pipe 4 heats up in the vicinity of flame glow plug 2 when starting with preheating.

## Test Stage 1:

- Move speed adjustment lever and shut-off lever to "stop" position.
- Insert key
   Position 0 = no operating voltage
- Turn key clockwise.
   Postion 1 = operating voltage
   Pilot light comes on.
- Press in key and turn further clockwise against the spring pressure.
  - Position 2 = preheat, hold for approx. 1 minute.
  - Preheat lamp lights up.
- Otherwise flame glow plug defective or power interrupted.

#### **Test Stage 2**:

- Loosen pipe connection 1.
- Rotate engine with starter, key on switch position 3.
- Fuel must be emitted at loosened pipe connection. Otherwise have the system, solenoid 3, checked by a specialist.

## Test Stage 3:

- Loosen pipe connection 1.
- Remove flame glow plug 2.
- Rotate engine with starter, key in switch postition 3.
- Fuel must be emitted at flame glow plug 2, replace plug 2 as necessary.
- Use sealant DEUTZ DW 47 when fitting flame glow plug 2.
- Refit flame glow plug 2 on fuel line. Keep clear of rotating parts.

Collect any leaked fuel and dispose of in an environmentally friendly fashion.

# **ENGINE PRESERVATION** 8.1

If the engine is to remain idle for an extended period of time, it is necessary to take protective measures to prevent rust formation. The preservative measures described here will protect the engine for up to 6 months. The procedure will have to be reversed before the engine is recommissioned.

- Anti-corrosion oils to specification:
  - MIL-L-21260B
  - TL 9150-037/2
  - Nato Code C 640 / 642
- Recommended cleansing agent to remove preservatives when recommissioning engine:
  - Petroleum benzine (hazardous materials class A3)

## 8.1.1 Preserving Engine

- Clean engine (with cold cleansing agent if preferred) using high pressure equipment.
- Run engine until warm, then turn off.
- Drain engine oil, see 6.1.2 and fill with anti-corrosion oil.
- If necessary, clean oil bath cleaner, see 6.4.3, and fill with anti-corrosion oil.
- Drain fuel from tank.
- Make up a mixture of 90% diesel fuel and 10% anti-corrosion
- oil, and refill fuel tank.
- Run engine for about 10 minutes.
- Turn engine off.
- Turn engine over manually several times to preserve the cylinders and combustion chamber. When rotating with starter, place shut-off lever in stop position.
- Remove V-belts and store dry in wrapped condition.
- Spray grooves on V-belts pulleys with anti-corrosion spray.

## 8.1.2 Removing Engine Preservatives

- Remove anti-corrosion agent from grooves in V-belt pulleys.
- Install V-belts. Retension after brief operation if necessary, see 6.5
- Remove plugs from intake port and exhaust port.
- Set the engine in operation.

# **ORDERING SPARE PARTS**

#### Order information

Please specify the following information when ordering original DEUTZ parts.

- Engine no.
- Ident. no.
- Quantity

#### **Document structure**

- The picture diagrams in this spare parts list are sorted according to engine assembly groups.
- Each section is preceded by an overview of the assembly groups.
- The ident. no. 08/23 us made up of the assembly group (e.g. 08) and item number (e.g. 23).

#### Service

#### Knowing it's DEUTZ

 DEUTZ has always stood for excellence in motor construction, pioneering many developments in the industry. As an independent motor manufacturer, we offer — worldwide — a comprehensive range of diesel and gas motors spanning from 4kW to 7,400kW. Our products are perfectly tailored to meet our customers' individual requirements.

Over 1.4 million DEUTZ motors do their job reliably all over the world. We are determined to preserve the high standard of performance and dependability of our motors, thus keeping our customers satisfied at all times. Therefore we are represented worldwide through a network of highly competent service partners who will meet the needs of our customers, wherever they are.

This is why DEUTZ is not only the name for motors which pack a lot of inventive genius. DEUTZ also means reliable service and comprehensive support to enhance your motor's performance.

This index Sales & Service offers you an overview of the DEUTZ partners in your vicinity, including the products for which they are responsible and the range of services provided. But even when no direct product responsibility is mentioned, your DEUTZ partner will be happy to help you with expert advice.

The Index is constantly updated. Please ask your DEUTZ service partner for the latest edition.

DEUTZ AG - at your service.

# HYDRAULIC CLUTCH CBM48

## 6.1 OPERATING

## NOTE:

1. Engaging the clutch against an immovable load, will cause premature failure of the clutch. Do not cycle the clutch (on/off/on/off etc.) with augers under-load.

### **COLD WEATHER OPERATION**

Cold weather affects the operation of the boring machine. Cold hydraulic fluid causes sluggish machine performance and can contribute to the premature failure of some machine components. Before starting to bore, the machine and hydraulic fluid must be at operating temperature (i.e. the machine must be warmed-up before boring).

### Warm-up procedure:

- 1. Start the machine and let it run at idle for 1-2 minutes.
- 2. Slowly increase the engine rpm to about 1/2 to 3/4 full throttle
- 3. Allow the engine to run at this higher speed for 4-5 minutes
- 4. Extend and retract the thrust cylinders to warm up the hydraulic fluid.
- 5. Occasionally running the machine over relief will help to reduce the warm-up time.

## Only after the machine is warmed up should you begin to bore!

## Hydraulic Clutch Operation:

SLUGGISH OR DELAYED APPLY TIME FOR THE CLUTCH CAN CAUSE PREMATURE FAILURE. The apply time for the clutch (the time it takes to build full pressure) is critical to the operation of the machine. Normal clutch apply time is less than 2 seconds. If the apply time is greater than 2 seconds, wait until the oil temperature increases before boring. The apply time can be monitored by the pressure gauge on the console panel. Cycle the clutch during warm-up, waiting 10 seconds between engagements. WHEN APPLYING THE CLUTCH DURING THE WARM-UP PERIOD, THE TRANSMISSION MUST BE IN NEUTRAL. Do not cycle the clutch during warm-up while coupled to loaded augers. Boring with an extended clutch apply time will cause premature failure of the clutch.

The hydraulic clutch operating system has 2 switches.

- 1. O.P.C. Switch
- 2. Clutch Switch

Both the O.P.C. switch and the Clutch switch must be in the "ON" position

before the clutch will operate. If the clutch does not operate, make sure that both of these switchs are "ON".

The hydraulic pressure is set at the factory for 225 psi. This pressure must be maintained for proper operation. DO NOT operate the clutch if the clutch pressure gauge is reading below 150 psi. Too low an operating pressure will result in premature clutch failure.

# HYDRAULIC CLUTCH CBM48

## **COLD WEATHER OPERATION**

## Hydraulic Fluid:

Use the alternate hydraulic fluid for the following:

- To reduce warm-up time before boring.
  - When consistently boring in cold weather.

Standard hydraulic fluid:

- ISO grade #46 with anti-wear additives.
- 76 Unax AW #46
- Or equivalent

Alternate hydraulic fluid:

- ISO grade #32 Wide Temperature Range oil with anti-wear additives.
- 76 Unax AW-WR #32
- Or equivalent

Consult McLaughlin for more information.

# HYDRAULIC CLUTCH CBM48

## **6.2 TROUBLESHOOTING**

# **DANGER**: DO NOT OPERATE MACHINE IF CLUTCH IS NOT OPERATING PROPERLY. DEATH OR SERIOUS INJURY WILL RESULT.

The hydraulic clutch supplied with this machine is a dry-running, self-adjusting, twin-disk clutch. The clutch requires very little maintenance. Following is a list of symptoms which may require servicing the clutch.

## 1. Contamination

The clutch is designed to run in a dry environment. However, the clutch housing can become contaminated. Contamination can result from dirt or sandy grit, oils, or water (which causes rust) entering the clutch housing.

Clean the disc pack kit with kerosene to restore to normal condition.

## 2. Drag in Neutral

It is natural for a twin-disc clutch to have a small amount of drag in the disengaged state. The drag should be more noticeable at low engine speeds and in low transmission gears.

### A. New machines or rebuilt clutches

There is an indeterminate break-in time required for new clutches. Once a clutch has been working for a while, it should seat itself and neutral drag should be at a minimum.

### B. Abrupt changes in clutch drag

If the drag in the clutch abruptly increases, it may be due to insufficient spring tension between the clutch discs. Weaker springs cause more drag between the discs of the clutch. Excessive heat, generated in the clutch by cycling the clutch or by applying the clutch against locked augers, will weaken the springs and cause excessive nuetral drag.

Replace disc pack kit and inspect all other components for damage and replace as necessary.

Refer to the Clutch Components and Disassembly/Assembly section of this manual for components and proper clutch service procedures.

# **PAGE LEFT BLANK**

## 7.2 Coupling Instructions

Tools Required: - 5/8" hex bit socket and ratchet

- 1 1/8" socket or wrench
- 3/16" Allen-head T-handle wrench
- McLaughlin Tool #4810321

## 1. REMOVAL

- Remove the coupling guard from mounted position on the transmission.
- Remove the two bolts that fasten the coupling hub to the coupling. Loosen the set screw over the key in the coupling hub. Slide the coupling hub up the input adapter shaft to create enough clearance for removing the coupling center member.
- Next, fit McLaughlin tool #4810321 onto the companion flange. Use this tool to prevent the transmission form rotating when removing the last two bolts of the coupling center member.

## **II. INSTALLATION**

- Install the coupling hub onto the input adapter shaft.
- Install the coupling center member into its' respective pilot holes on the coupling adapter plate. Fit McLaughlin tool #4810321 onto the companion flange and then tighten the two botls to 225 ft-lbs.
- Slide coupling hub onto the pilots of the coupling center member. Tighten the two bolts to 225 ft.lbs.
- Tighten the set screw over the key.
- Install the coupling guard.

## 7.3 Hydraulic Pump Coupling

## Alignment

Loosen, but do not remove the 4 screws that attach the pump adapter plate to the pump mount. Adjust the pump plate until the nylon sleeve on the coupling slides freely. Tighten the 4 screws. (Fig. 1-c)

## Disassembly/Assembly

D1. Remove the screw for the pump and pull the pump out of the adapter plate. Do not remove the 4 screws which attach the adapter plate to the pump mount.

D2. Loosen the coupling cross-clamp and remove the coupling from the pump shaft.

D3. Remove the nylon sleeve.

D4. Remove the screws that attach the coupling hub to the adapter plate and remove the coupling hub.

## Assembly

A1. Pilot the adapter plate to the engine crankshaft pulley. Make sure that all hoses are properly lined up and that the adapter is sitting flush against the pulley. Apply Loctitie #271 to the screws and tighten the screws in an alternating circular pattern.

A2. Pilot the coupling hub into the adapter. Make sure that the coupling is sittling properly on the face of the adapter. Apply loctite #271 to the screws andtighting the screws in an alternating pattern.

- A3. Install the nylon sleeve onto the coupling.
- A4. Install the pump coupling onto the pump

## 7.6 CLUTCH SERVICE

## Disassemble for Disc Change:

- Remove sheaves, keys, belts, etc. from the output end of the clutch shaft and remove the instruction cover plate (#7).
- 2. Remove hydraulic connection (#15) to clutch housing.
- Remove cap screws that secure the clutch housing to the flywheel housing. (Note: There are two 3/8-16 tapped holes in the housing to be used for pusher bolts to assist in removing the clutch from engine.)
- 4. Remove pilot bearing (#24) from end of shaft (#19) using a standard bearing puller.
- Remove six socket head screws (#47) from clutch back plate (#45). Remove back plate(#45), friction discs (#42), and separator plate (#43).
- 6. Check for heat damage to springs (#44), pressure plate (#40), back plate (#45), and hub spline (#39).

## Assemble for Disc Change:

- Position bell housing clutch assembly in vertical position with input side up.
- 2. Position friction discs (#42) and separator plate (#43)on to pressure plate (#40).
- Carefully position back plate (#45) over springs in line with center pilot. Reinstall socket cap screws (#47) and lockwashers (#46) to complete the clutch assembly.
- 4. Torque screws to 15-17 lbs ft torque.

## **Disassemble Clutch:**

- Remove sheaves, keys, belts, etc. from the output end of the clutch shaft and remove the instruction cover plate(#7).
- Remove hydraulic connection (#15) to clutch housing.
- Remove cap screws that secure the clutch housing to the flywheel housing. There are two 3/8-16 tapped holes in the housing to be used for pusher bolts to assist in removing the clutch from engine.
- Remove pilot bearing (#24) from end of shaft (#19) using a standard bearing puller.
- Remove six socket head screws (#47) from clutch back plate (#45). Remove back plate (#45) friction discs (#42), separator plate (#43).
- Remove the shaft nut (#23) and lock washer (#22).
- Remove the bulkhead fitting (#15), and fitting nut (#6) from side of housing (#1).
- Remove clutch and key (#20) from tapered shaft (#19) using standard "T" bar wheel puller with two 5/16-18 bolts.
- Remove hydraulic hose (#13) from fitting on piston body (#34).
- Turn clutch face down and remove back retainer plate (#27) by removing three 1/4-20 flat head screws (#26).
- Remove external snap ring (#28) from hub (#39) and press hub (#39) out of clutch body assembly. Note: Clutch body can be supported with two 1" square bars as shown in <u>Figure B</u> (for disassembly of hub (#39).
- Remove cylinder assembly (#32) from piston (#34) by inserting an air hose into the actuation port and providing a blast of air.
- Check cylinder bearing. If bearing (#29) turns freely and shows no signs of wear, leave assembled in cylinder assembly (#32). If not, set cylinder assembly (#32) face down on spacers and remove bearing (#29) by taping on outer race with flat punch.

- Turn clutch face up and remove pressure plate (#40) by removing two #10-24 cap screws (#41).
- Remove front retainer plate (#36) and three 5/16-18 flat head screws (#37).
- 16. Check piston bearing (#35). If bearing turns freely and shows no signs of wear leave assembled in piston body (#34) and on spacer (#38). If not, turn piston (#34) assembly face down and remove front bearing (#35) and spacer (#38) assembly by taping on outer race with flat punch.
- 17. Remove bearing (#35) from spacer (#38) using two 1/4-20 screws in holes provided.

## Assemble Clutch:

- Position cylinder (#32) with three holes up. Position bearing (#29) in cylinder bore with thick side of outer race facing down. Apply Loctite #609 (or equiv.) compound to outer race and press bearing (#29) to seat. Apply oil to o'ring groove and install o'ring (#30).
- Position piston (#34) with bearing bore up. Position bearing (#35) in bore with thick side of outer race facing down, apply Loctite #609 (or equiv.) compound to outer race and press to seat. Position spacer (#38) in bearing bore, apply retaining compound to spacer and press bearing to seat.
- Apply Mobil #SHC 100 grease to bearing balls. Position retainer spacer (#36) on piston assembly (#34) and seat securely with three 5/16-18 flat head screws (#37). Torgue to 15 to 17 lbs.-ft.
- Position pressure plate (#40) on assembly, align with two #10-24 holes and install two cap screws (#41) to prescribed torque.
- Turn assembly with pressure plate face down. Apply oil to o'ring groove and install o'ring (#33). Position cylinder assembly (#32) in bore aligning dowel pin (#31) with anti rotation hole in piston and press the assembly to seat. (Note: the hole intersecting the fitting is the WRONG hole)
- Position assembly over hub (#39), align gear teeth in pressure plate (#40) with gear teeth in hub (#39) and press to seat.
- 7. Install external snap ring (#28) on hub (#39).
- Apply Mobil #SHC 100 grease to bearing balls. Position retainer spacer (#27) on cylinder (#32) and seat securely with three 1/4"-20 flat head screws (#26).
- 9. Position assembly with pressure plate (#40) face up. Position one friction disc (#42) on pressure plate (#40).
- Position the separator plate (#43) over the hub (#39), aligning the six thru holes in the separator plate with the six spot faced holes in the pressure plate.
- Position the six springs (#44) through the holes of the separator plate (#43) and on to the spot faced holes
  of the pressure plate (#40). The six springs should be flat and square to the pressure plate (40).
- 12. Position the backplate (#45) so that the six spot-faced holes fit over the six springs.
- 13. Install six socket head cap screws (#47) and lock washers (#46) to complete the clutch assembly.
- 14. Attach and tighten hydraulic hose (#13) and (#14) to clutch body.

## 7.7 PUMP SETTINGS AND ADJUSTMENTS

This machine is equiped with a pressure compensated, hydraulic piston pump with load sense. It has two adjustable settings, Compensator pressure setting and Stand-by pressure setting. Refer to the Specifications and Settings section of this manual for those settings. The case ports are identified by the following marks:

Inlet Port (suction) : Right side of pump (facing the front of the machine) Outlet Port (pressure) : Left side of pump (facing the front of the machine) Load Sense Port: Top center of pump, marked "X". Case Drain Port: Top center of pump, marked "L2". Gauge Port (system pressure) : Bottom side of pump, marked "M2".

Stand-by Pressure Adjustment				
Pump Setting Detail				

## Setting the Stand-by Pressure ~ 250-300 psi (17.5 - 20.7 bar)

### \*Remove and cap 2nd system to read only pump stand-by pressure.

The Stand-by pressure setting, is set by adjusting the top set screw on the top-center of the pump case.

- 1. Install a 0-5000 psi minimum pressure gauge into the gauge port on the pump.
- 2. Start the engine. The pressure on the gauge is the current stand-by pressure setting.
- 3. Loosen, but do not remove, the locking set screw in the side of the adjustment housing.
- 4. Adjust the set screw in the center of the adjustment housing until the desired pressure is acheived.
- 5. Tighten the locking set screw.
- 6. Check pressure setting.

#### Setting the Compensator ~ 5000 psi (344.8 bar)

The Compensator pressure setting is set by adjusting the bottom set screw on the top-center of the pump case.

1. Install a 0-5000 psi minimum pressure gauge into the gauge port on the pump.

2. Start the engine and retract the cylinders using the manual lever on the thrust control valve.

3. Dead-head the cylinder in the retracted position and the pressure on the gauge is the compensator setting.

4. Loosen, but do not remove, the locking set screw in the side of the adjustment housing.

5. Adjust the set screw in the center of the adjustment housing until the desired pressure is acheived. Dead-head the cylinders and make an adjustment. Release the cylinders and allow the pump to drop to stand-by pressure before making more adjustments. Do not try to adjust the pump all at one time.

6. Tighten the locking set screw.

7. Check pressure setting.

NOTE: There are no other adjustable functions on this pump. If the pump requires more service, consult the McLaughlin Manufacturing Co. for pump service and repair instructions.

## 7.8 Main Thrust Valve Adjustment

The main thrust valve has both a manual control lever, and an electric solenoid control. The electrical control portion is covered under the Autobore section. The valve has an adjustable relief valve built in. It is preset at the factory and should not require adjustment in the field. Reference the Components section for valve handles.

## Relief Valve Adjustment ~ 3100+ psi (351.7 + bar)

The relief valve is located just below the instrument panel. Raise the instrument panel to access the relief valve.

1. Install a 0-3000 psi minimum pressure gauge into the gauge port on the pump.

2. Start the engine and confirm that the compensator is set at the proper setting. Note: the relief valve is set 100-200 psi (6.9 - 13.8 bar) above the compensator setting. If the compensator setting is wrong, the relief valve setting will be wrong.

- 3. Remove the locking cap.
- 4. Loosen, but do not remove the locking nut on the relief valve.
- 5. Loosen the relief valve threaded stud 1-2 turns.

6. Run the machine and collapse the thrust cylinders using the manual lever on the valve.

7. Dead-head the cylinders in the retract position and adjust the relief valve until the engine relieves its self. Adjustment of this valve is an audible determination. When the pump goes over relief it continues to pump oil which lugs the engine down. When the pump reaches proper compensator setting and destrokes, the relief valve is set properly.

8. After the pump de-strokes, turn the relief valve threaded stud 1/4 of a turn and tighten the lock nut.

- 9. Install the locking cap.
- 10. Replace and secure the instrument panel.

# **WARRANTY & RETURN GOODS POLICY**

## LIMITED WARRANTY

The Manufacturer warrants its products to be free from defects in material and workmanship for a period of twelve months from the date of shipment from the factory. Hole Hammer pistons, bodies, and nose pieces are warranted to be free from defects in material and workmanship for a period of three years from the date of shipment from the factory. The Manufacturer shall not be responsible for any damage resulting to or caused by its products by reason of installation, improper storage, unauthorized service, alteration of the products, neglect or abuse, or use of the product in a manner inconsistent with its design. This warranty does not extend to any component parts not manufactured by Manufacturer; however, Manufacturer's warranty herein shall not limit any warranties made by manufacturers of component parts which extend to Buyer.

Claims for defects in material and workmanship shall be made in writing to Manufacturer within ten days of discovery of defect. Manufacturer may either send a service representative or have the product returned to its factory at Buyer's expense for inspection. Upon notification of defect, Manufacturer will issue a return goods authorization number to Buyer. The return goods authorization number must accompany the product returned. If judged by the Manufacturer to be defective in material or workmanship, the product will be replaced or repaired at the option of the manufacturer, free from all charges except authorized transportation. Buyer shall be responsible for all maintenance services consisting of lubrication and cleaning of equipment, replacing expandable parts, making minor adjustments, and performing operating checks, all in accordance with procedures outlined in Manufacturer's maintenance literature.

THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES AND NO REPRESENTATIONS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, (INCLUDING BUT NOT LIMITED TO A WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE), ARE MADE BY THE February 8, 2005 MANUFACTURER IN CONNECTION WITH THE MANUFACTURE OR SALE OF ITS PRODUCTS. NO EMPLOYEE, DISTRIBUTOR, OR REPRESENTATIVE IS AUTHORIZED TO CHANGE THIS WARRANTY ON BEHALF OF MANUFACTURER THE REMEDIES OF BUYER SET FORTH HEREINARE EXCLUSIVE AND ARE IN LIEU OF ALL OTHER REMEDIES. THE LIABILITY OF MANUFACTURER WHETHER IN CONTRACT, TORT, UNDER ANY WARRANTY, OR OTHERWISE SHALL NOT EXTEND BEYOND ITS OBLIGATION TO REPAIR OR REPLACE. AT ITS OPTION ANY PRODUCT OR PART FOUND BY MANUFACTURER TO BE DEFECTIVE IN MATERIAL OR WORKMANSHIP. MANUFACTURER SHALL NOT BE LIABLE FOR COST OF INSTALLATION AND/OR REMOVAL OR BE RESPONSIBLE FOR DIRECT, INDIRECT, SPECIAL OR CONSEQUENTIAL DAMAGES OF ANY NATURE.

## **GENERAL RETURNS OF MERCHANDISE**

- 1. All returns must be pre-authorized
  - A. Please call our parts department for an RGA number
  - B. Please include RGA number on the outside of box
  - C. Include any required paper work or special instructions
  - D. Items returned without an RGA number will not be accepted
- 2. All returns are subject to a 20% restock charge.
- 3. Special items are non-returnable
  - A. Non-stock parts
  - B. Custom parts

C. If you are unsure about a parts status when ordering, ask your McLaughlin representative if the item fits on of the above conditions.

- 4. Items must be returned within thirty days of original order date.
- 5. Items not returned within 30 days from the date of RGA is issued will not be accepted.
- 6. The item(s) must be in new condition. Used item(s) are not returnable.

# **END OF MANUAL**
