

ECO 75 VACUUM EXCAVATOR MCLAUGHLIN SERIES

CAM-OVER REAR DOOR.

Provides a 360-degree positive seal, even under reverse pressure without additional clamping requirements. The highly reliable cam-over door has no in-tank moving parts, so all maintenance is external.

3-STAGE CYCLONIC FILTRATION.

Engineered to prolong filter and blower life, the system is suitable for wet and dry applications. The cyclones use a tuned vortex system in which the outer vortex spiral forces small particles to fall into a separate canister. The filtered stream then passes up through the inner cyclone tube and is carried to the final poly filter.

IN-TANK WASH-DOWN.

Delivers a high-pressure water spray to the tank interior helping simultaneously dump material and clean the inside of the tank. Saves clean up time and makes it easier to remove difficult debris.

ECONOMICAL OPERATION.

Delivers fuel savings of more than 50% compared to PTO drive and has lower maintenance costs compared to truck engine services. Offers the versatility to mount on new or used truck or on off-road crawler carriers.

HYDRAULIC BOOM (OPTIONAL).

Exclusive telescoping boom maintains hose length during extension and incorporates a remote controlled hydraulic valve for vacuum shut off. Available with manual or hydraulic rotation.

MODULAR DESIGN.

Mount on a new or used double frame truck chassis, on or off road crawler, carriers or hook truck bodies for access to difficult projects.
